Sequence 3789, Application US/09134001C

GENERAL INFORMATION:

TITLE DE INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: GTC-007

CURRENT APPLICATION NUMBER: US 60/064,964

PRIOR APPLICATION NUMBER: US 60/064,964

PRIOR APPLICATION NUMBER: US 60/055,779

PRIOR APPLICATION NUMBER: US 60/055,779

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

TWHEE OF SEQ ID NOS: 5674

SEQ ID NO 3789

LENGTH: 323

TYPE: PRT

CREANISM: Staphylococcus epidermidis

Sequence 2594, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID. AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAR

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: DATE: 2000-04-04

CURRENT APPLICATION NUMBER: US/09/540,236

CURRENT APPLICATION NUMBER: US/09/540,236

LENGTH: 260

LENGTH: 260

TYPE: PRT

TYPE: PRT

TYPE: PRT

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1148, Application US/09538092

Patent No. 675314

GENERAL INFORMATION:

APPLICANT: Glot, Loic

APPLICANT: Mansfield, Traci A.

TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same

TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same

TITLE PEPERENCE: 15966-542

CURRENT APPLICATION NUMBER: 05/09/538,092

CURRENT FILING DATE: 2000-03-29

PRIOR FILING DATE: 1999-04-01

PRIOR FILING DATE: 1999-04-01

PRIOR FILING DATE: 2000-02-01

NUMBER OF SEQ ID NOS: 1387

SOFTWARE: CuraPatSeqFormatter Version 0.9

SEQ ID NO 1148
                                                                                                                                                                                                                                                                                            .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            oʻ
                                                                                                                                                                                                                                                                                                                                                                                      RESULT 14

US-09-468-253B-14

US-09-468-253B-14

Sequence 14, Application US/09468253B

Patent No. 6750012

GENERAL INFORMATION:

APPLICANT GOULd-Rothberg, Bonnie

TITLE OF INVENTION: Differential Gene Expression

TITLE OF INVENTION: Differential Gene Expression

FILE REFERENCE: 1596-129

CURRENT APPLICATION NUMBER: US/09/468,253B

CURRENT APPLICATION NUMBER: 60/113,127

PRIOR FILING DATE: 1998-12-21

NUMBER OF SEQ ID NOS: 71

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 14

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate + H(+)(Out).

-!- SUBUNIT: P-type ATPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: and CF(0) - the membrane proton channel. CF(1) has five similarity).
-!- SIMILARITY: Belongs to the ATPase B chain family.
-!- SIMILARITY: Belongs to the ATPase B chain family.
-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .
